GRADING CASE 1

Supporting the Sales Department of Rustic Roasters (1)

You are tasked with building a Business Intelligence report for the Sales Department of Rustic Roasters, a coffee trading company.

Several customers have complained about receiving their orders too late (i.e., after the requested date).

The Sales Department wants to gain deeper insights into this issue and identify potential causes of these delays.

You have been provided with the following data files:

- customer.xlsx
- logistics_partners.xlsx
- material.xlsx
- sales_transactions.xlsx
- warehouse.xlsx

Your report should leverage these datasets to analyze the current situation and support data-driven decision making for the Sales Department.

Supporting the Sales Department of Rustic Roasters (2)

The sales_transaction file contains two key columns:

- "requested_date": the date on which the customer expected the delivery
- "received_date": the date on which the customer received the material

The Chief Sales Officer is convinced that delivery punctuality varies depending on the requested month and weekday.

Is he right?
